|             | Castor resistance:                                  | EN 13 329<br>(EN 425) | no visible changes or damage with soft, standard castors  |
|-------------|---|-----------------------|---|
|             | Behaviour on simulation of shifting furniture foot: | EN 13 329<br>(EN 424) | no visible damage   |
|             | Underfloor heating:                                 |                       | Suitable for hot-water underfloor heating Electrical underfloor heating is generally suitable when it is built into the floor screed or the concrete layer and thus does not lie on the concrete layer as foil heating. The heating elements   pipes   wires must lie across the entire area and not just be partly present. If the area is only partially heated, the floor covering must have expansion joints (system profile strips). The maximum permitted surface temperature is 29°C. Standard foil heating systems are generally not recommended. One exception is self-regulating heating systems which maintain the 29°C surface temperature.                       |
|             | Heat transfer resistance:                           | EN 12 667             | with MEISTER-DuoGuard: 0.104 m <sup>2</sup> K/W   |
| olerances   |   |                       |   |
|             | Right-angle of the elements:                        | EN 13 329             | target values met   |
|             | Determination of edge straightness:                 | EN 13 329             | target values met   |
|             | Surface flushness:                                  | EN 13 329             | target values met   |
|             | Joint opening between the elements:                 | EN 13 329             | target values met   |

|             | Blue Angel:   | RAL-UZ 176            | awarded   |
|             | Disposal:   |                       | Residual pieces can be disposed of in household refuse (e.g. thermal treatment) Dispose large quantities according to municipal provisions (e.g. recycling centres) An energetic utilization in authorized plants is recommended.   |
|             | Cleaning and care:                                  |                       | Cleaning after construction work/ day-to-day cleaning:<br>CC Laminate Cleaner<br>Special cleaning:<br>CC-Elatex Stain Remover   |
|             | Areas of application:                               |                       | The Classic flooring LC 55 is suitable for all dry living areas as well as for commercial areas with medium wear, e. g. hotel rooms, small offices, conference rooms etc. This flooring is not suitable for installing in humid rooms (bathrooms, saunas etc.). Special requirements apply to treatmer rooms and medical practices.   |
|             | Preconditions for installation:                     | DIN 18 365            | The substrates must be ready for laying on according to the generally recognised rules of the trade, taking into account VOB (German construction contract procedures), part C DIN 18 365 "parquetry work". The substrate must be dry (in the case of mineral substrates max. 2% or with underfloor heating 1.8 %, with anhydrite screed max. 0.5% or with underfloor heating 0.3 % residual moisture – measured with CM devices; even, firm and clean. Additionally, any unevenness of 3mm/per initial metre and 2mm per further metre must be evened out according to DIN 18 202, table 3, line 4.The installation instructions provided with the product must be observed. |
